DXpedition News

Scarborough Reef - BV9 Although there has been no formal announcement as of press time, there have been consistent rumors of a second operation from Scarborough. There are many obstacles to overcome, not the least of which is bad blood between China and the Philippines over the Spratlys. (See the DX column in the May, 1995, issue of *CQ* for more on this.) If all the problems can be overcome, look for **BS7H** April 12-15, concentrating on 20 and 40 meters. Since the first operation will most likely **not** be accepted for DXCC credit, regardless of potential DXCC country status, those DXers who worked the first operation should make sure they are in the log this time. This operation will be "land-based," from two separate rocks. QSL route for this operation is via JA1BK. Sunrise 2150Z; sunset 1010Z.

Scarborough Reef

An application for separate DXCC status for Scarborough Reef is pending before the ARRL DX Advisory Committee. The application is based on DXCC country criterion Point 2(a): separation by water. The numerous rocks that comprise the Reef lie more than 225 miles from the nearest Chinese territory. There is no significant disagreement that Scarborough meets the country criteria as written. If this application is considered fairly under the **existing** DXCC country criteria, is should be a New One for DXCC. There is some sentiment that DXCC countries should meet some "minimum-size" criteria; in fact, the DXAC voted in favor of such a rule. However, this vote was **not** confirmed by the Awards Committee. Also, the Scarborough Reef application was submitted prior to the minimum-size debate.

Shortly Noted

■ **C6AGN** will be active from Green Turtle Cay (NA-080) April 22-May 24. Operator Bill Wiseman W1SE has replaced the tower and antennas that were destroyed by a late-season storm in December. He promises to be more active on the bands than during his earlier visit, when he had to spend most of his time rebuilding the tower and antennas. QSL home call.

■ The **3D2CT/CU** DXpedition crew departed Conway at 0200Z April 3. QSL routes are in Issue 779. Contributions toward replacing the equipment lost in the rough landing would be appreciated.

Propagation Watch

Solar flux levels plummeted at the beginning of April, dropping down to the mid-70s. This drop puts considerable downward pressure on maximum useable frequencies (MUFs). Not only are 10 and 12 meters quiet, but 15 meters and even 17 meters have been severely impacted. 20 meters is providing the bulk of high-band DXing.

Following some geomagnetic activity in the next few days, DXers should look for good band conditions mid-month. While solar flux may not be as high as during the last two solar revolutions, the geomagnetic field is forecast to be very quiet, providing some more excellent low-band openings. We are getting near the end of the low-band season, so pay particular attention to those bands over the next couple of weeks.

Geomagnetic activity will probably pick up again after April 21; be prepared for deteriorating conditions.

Remember that even a single significant sunspot can boost MUFs; the best way to tell if a band is open is to call CQ in a likely direction. When everyone listens and nobody transmits, all bands sound dead. Good hunting!
